

Sprint 3 Report
A Code World
Team CodeA
11/19/17

The team does not need to stop doing anything because everything is going smoothly.

The team will start to be productive again now that midterms are over. We will start working on combining all of our works into one single program.

The team will continue to keep on talking after the scrum meeting about new designs. Also different game implementations such as items to use, different enemies, and boss levels. Brainstorming for ideas to add to the game is better expressed in in-person meetings than over text and messages.

Some user stories were completed, including a text editor and item spawns. Incomplete user stories include item functionality and enemy movement. The total number of hours required for our user stories was 48. The total number of days in the last sprint were 14 days.
